

Layer 3 48-Port 10/100/1000T + 4-Port 1000X SFP Stackable Managed Switch

Powerful Layer 3 Gigabit Routing Solution for Enterprise Backbone and Data Center Networking

PLANET SGS-6340-48T4S is a Layer 3 Stackable Managed Gigabit Switch that provides high-density performance, Layer 3 static routing, RIP (Routing Information Protocol) and OSPF (Open Shortest Path First). With 104Gbps switching fabric, the SGS-6340-48T4S can handle extremely large amounts of data in a secure topology linking to an enterprise backbone or high capacity servers. The powerful WRR (Weighted Round Robin) and Network Security features make the SGS-6340-48T4S perform effective data traffic control for ISP and enterprise VoIP, video streaming, and multicast applications.

Layer 3 Routing Support

The SGS-6340-48T4S enables the administrator to conveniently boost network efficiency by configuring Layer 3 static routing manually, the RIP (Routing Information Protocol) or OSPF (Open Shortest Path First) settings automatically. The RIP can employ the hop count as a routing metric and prevent routing loops by implementing a limit on the number of hops allowed in a path from the source to a destination. The maximum number of hops allowed for the RIP is 15. The OSPF is an interior dynamic routing protocol for autonomous system based on link-state. The protocol creates a link-state database by exchanging link-states among Layer3 switches, and then uses the Shortest Path First algorithm to generate a route table based on that database.
