

CE790 Digital KVM Extension Solution

Unlimited Access from Anywhere Over the Intranet

Thank you for purchasing the ATEN CE790 Digital KVM Extender. This product will enable you to manage your system efficiently and conveniently from a remote console located anywhere on your existing network infrastructure.

The CE790 system consists of a transmitter (CE790T) that connects to the computer system and a receiver (CE790R) that is located on the user's desk, providing access and control of various computing resources from any number of remote consoles via a standard TCP/IP network.

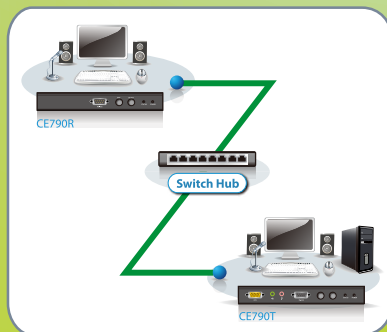

So the CE790 can be installed in point-to-point, point-to-multipoint, multipoint-to-point and multipoint-to-multipoint configurations; it's perfect for use in any type of installation where you need multiple consoles in conveniently accessible locations.

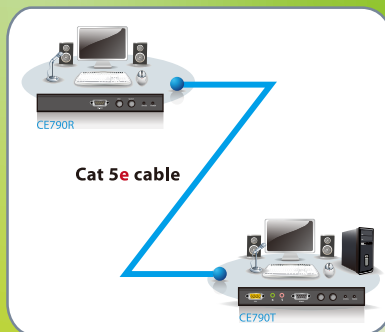

ATEN also offers both the transmitter (CE790T) and receiver (CE790R) units in separate packages. Any number of transmitters and receivers can be purchased to meet the needs of your various configurations. Please contact your dealer for more details.

Example Installations:

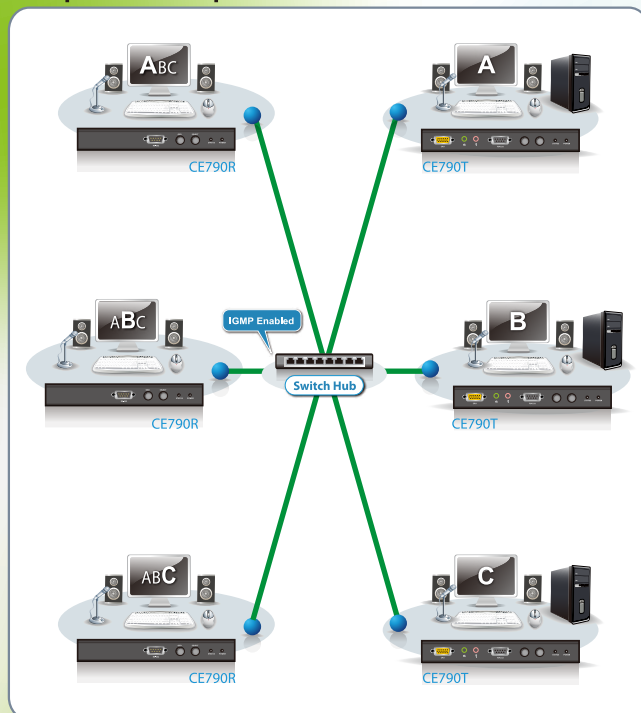

Point-to-Point

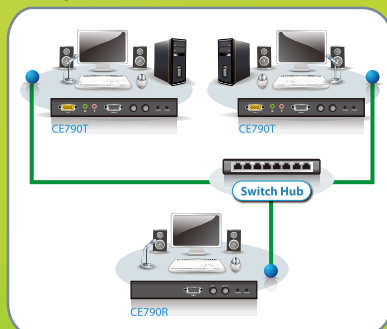

Point-to-Point

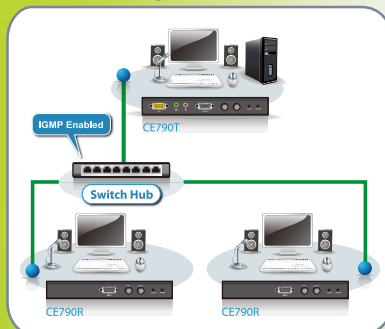

Multipoint-to-Multipoint

Multipoint-to-Point

Point-to-Multipoint

In multipoint configurations, the IGMP (Internet Group Management Protocol) function of your network switches/hubs should be enabled to avoid deterioration of data throughput. If you do not know how to enable IGMP, please contact your network administrator.
