EASY INSTALLATION
DIGITUS®
in just
1 minute!
VIA APP

Conventional IP-cameras can only be installed and configurated with extreme effort and high technical knowledge. The biggest barrier is the external accessibility via the internet:

· The firewall and the router ports have to be approved
· The corresponding IP address has to be known
· An external service, e.g. DynamicDNS, has to be set up to approach the camera via the internet
· A network router has to be integrated into the own network
· The network router has to be embedded at an external service provider

The **DIGITUS Plug&View cameras** use a new and innovative way of setting up: Via the online service "myDIGITUS" and the individual code of each camera, a connection between user and camera is built up automatically. Thus, there is no need for a time-consuming and complex installation.

With the help of a setting up assistant, the IP-camera is ready for use within just one minute. After the registration in the "myDIGITUS" portal, the camera is recognized and added to the user account automatically. The access is possible from everywhere via Smartphone, tablet, PC or Mac to have a look on Snapshots and video sequences or to configure settings.

Keep an eye on what's important to you – this is how DIGITUS® Plug&View works

Step 2&3

DIGITUS® Plug&View Camera

Smartphone, Tablet, PC and Mac

The IP-camera registers itself automatically and independently on the cloud-server (**www.myDIGITUS.net**) after it has been activated in the network and a connection to the internet has been set up. Now, please activate your user account via the internet browser or the Smartphone/Tablet app. Thus, the cloud-server can connect the mobile device to the camera.

After you have successfully set up a user account on **www.myDIGITUS.net**, all available cameras which are registered under your name will be shown.

Choose one of the cameras via mouse-click and the cloud-server will provide the IP-addresses of the devices which are meant to be connected. With the delivered information of the cloud-server, the

Smartphone or Tablet will build up a direct and protected tube connection to the camera. Thus, there are no video contents visible for third persons. Personal image information will also not be filed in the internet. Therefore, data privacy protection is guaranteed.

But, you can also configure your end-devices willfully via your user account to save the video data within the cloud, on a "Google Drive" access. Thanks to this, recorded video information is available over your personal access via app or internet browser.

Moreover, the system provides the chance of **sending messages to your mobile device** or of concerted data-saving in case of **motion detection**. Thus, the saved data can be retrieved at any time via app or internet browser.
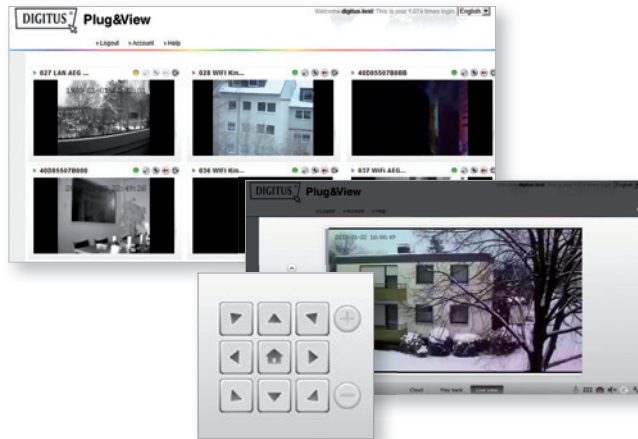

DIGITUS® Plug&View App & www.myDIGITUS.net

Internet Browser – View

Add camera
1. Add camera into the internet browser of the PC/Laptop
2. Type in the activation key (which you can find within the package) under **www.myDIGITUS.net** for registration
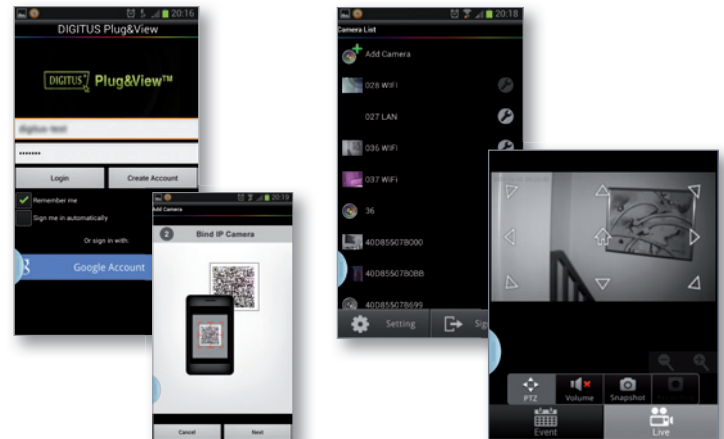

Internet browser
Browser compatibility – IE, Safari, FireFox
Platform comprehensive – Windows, Mac, Linux
Simultaneous view onto different browsers - up to 6 cameras visible

Smartphone and Tablet - View

Add camera
1. Add camera into the DIGITUS® Plug&View App of your iPhone/Android Smartphone or Tablet
2. Scan the QR-code (which you can find in the user guide)

Program/Software
Mobile App – iOS & Android

DIGITUS® OptiView

Your compact network camera for easy installation in less than one minute.

· High video resolution (VGA 640 x 480)
· Built-in LEDs for better night surveillance
· Powerful mobile surveillance supporting iOS and Android devices
· Wireless LAN according to the newest 11n Standard for fluent image transmission
· Simple and fast installation with P2P-support & QR-code-scanning
· Advanced motion detection - email notification
· Integrated webserver supports standalone operation with direct internet connection
· MJPEG image compression, 4x digital Zoom
· LAN Speed: 10/100Base-TX Ethernet
· Built-in microphone
· Supports Micro-SD card for local storage up to 32GB
· Easy mounting due to the included accessories
· Suitable for the most common browsers
· Operating temperature: 0°C - 40°C
· Supports DIGITUS® Plug & View app for smartphone and tablet pc access
· Dimensions: 135 x 60 x 64mm

DIGITUS® Plug&View Cameras for the private application area

Baby –
Always keep an eye on your little ones. The ideal alternative if the baby-phone comes to its limits.

Animals –
You want to know what your dog or cat is doing alone at home? Supervise your animals on the go.

The elderly –
Supervise solely living elderly people from the distance and use the chance to react to potential emergencies.

Homestead –
Observe the incidents at home from your working place. Protect your homestead from burglary and thievery.

DIGITUS® Plug&View Cameras for the commercial application area

Hotels –
The DIGITUS® Plug&View cameras are the ideal solution not just for your own accommodations, but also for protection of guests.

Companies –
Protect your company from unauthorized entrance or vandalism as well as your employees from mobbing and thus guarantee self-security.
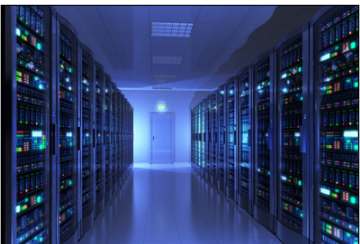

Data Center –
Here, the focus lies on safety – Protect your data center from unauthorized visitors and thus defend the most sensible aspect of your company: namely company and network data.

Car Pool –
The DIGITUS® Plug&View outdoor cameras are perfectly suitable for the surveillance of your car pool as to defend it from vandalism.

Advantages for the end-user

Everything which is important and valuable on a digital view – 24/7! Just easily register your computer in the **"myDIGITUS" portal** and observe the happenings at home – or the other way around! You won´t miss a thing – even on the go! Watch the Livestream from the camera via the app on your Smart-phone or Tablet.

But, there is a lot more – full control thanks to **Shift & Tilt and Zoom Control**! With the supported camera models, the viewing direction can be changed remotely and the image section can be zoomed. The picture recording is started automatically by the motion recognition function. In case of a defined action (e.g. opening of a door), an email is sent with a snapshot of the recorded situation.

Advantages for the specialized retailers

DIGITUS® Plug&View cameras launch a **new segment** in the market of IP-cameras and security technology. With technical innovations and developments, products, which were once only reserved for accomplished users, are getting ready for mass-implementation and can now be used by technical lay-men without any problems. The scenarios of application in **private household**, as well as in the **industry** are count-less. A constantly increasing demand of security of the users causes another boom within this market.

The benefit of DIGITUS® Plug&View cameras are declared in detail on the packaging, the easiness of the installation is highlighted. Therefore, the products become **fast-selling items**, which independently sell well without any service at the POS. The online presentation in the **"myDIGITUS.net"** and the **DIGITUS® Plug&View App** are designed to control various cameras simultaneously, which strengthens post-purchase.

Despite of the very best technical equipment, the range is optimized for attractive recommended retail prices for end-users and for interesting margins of specialized retailers

DIGITUS®
Plug&View App

Attractive product portfolio.
Innovative technology.
Exclusive selling opportunities.
