Huawei eKitEngine AP772 Wireless Access Point Datasheet

BE6450 High-Protection Dual-Band Gigabit Outdoor AP

Make SME Network Easier and Smarter

Product Overview

Huawei eKitEngine AP772 is an outdoor access point (AP) that complies with Wi-Fi 7 (802.11be) and provides a maximum of six spatial streams. The AP leverages Wi-Fi 7 innovations to significantly improve users' wireless experience. It stands out with excellent outdoor coverage performance, IP68 waterproof and dustproof ratings, and strong surge protection capability. These strengths make the AP ideal for coverage scenarios such as high-density stadiums, squares, pedestrian streets, and amusement parks.

Product Highlights

- The AP is equipped with built-in omnidirectional antennas and can provide wireless services through dual radios: 2.4 GHz (2x2 MIMO) + 5 GHz (4x4 MIMO).

- The Ethernet ports of the AP support 6 kA surge protection. The AP supports IP68 waterproof and dustproof ratings, and an extended operating temperature range of –40°C to +70°C (–40°F to +158°F), meeting industrial-grade requirements.

- With its built-in Bluetooth functionality, the AP enables O&M over the Bluetooth serial interface by collaborating with the CloudCampus APP.

- It can work in Fit, Fat, or cloud mode.

Feature Description

Wi-Fi 7 (802.11be) Standard

Wi-Fi 7 (802.11be) is the next-generation Wi-Fi standard, also known as IEEE 802.11be or Extremely High Throughput (EHT). It is compatible with protocols such as Wi-Fi 6 and Wi-Fi 5.

Based on Wi-Fi 6, Wi-Fi 7 introduces technologies such as 320 MHz channel width, 4096-QAM, multi-resource unit (RU), MLO, enhanced MU-MIMO, and multi-AP coordination. In this way, Wi-Fi 7 provides a higher data transmission rate and lower latency than Wi-Fi 6.

New Features in Wi-Fi 7

Multi-RU mechanism

- In Wi-Fi 6, each user can send or receive frames only on the RUs allocated to them, which greatly limits the flexibility of spectrum resource scheduling. To solve this problem and further improve spectral efficiency, Wi-Fi 7 defines a mechanism for allocating multiple RUs to a single user. To balance the implementation complexity and spectrum utilization, the Wi-Fi 7 standard specifications impose certain restrictions on RU combinations. That is, small RUs (containing fewer than 242 tones) can be combined only with small RUs, and large RUs (containing greater than or equal to 242 tones) can be combined only with large RUs. Small RUs and large RUs cannot be combined together.

Higher-order 4096-QAM

- The highest order modulation supported by Wi-Fi 6 is 1024-QAM, which allows each modulation symbol to carry up to 10 bits. To further improve the rate, Wi-Fi 7 introduces 4096-QAM so that each modulation symbol can carry 12 bits. With the same coding, 4096-QAM in Wi-Fi 7 can achieve a 20% rate increase compared with 1024-QAM in Wi-Fi 6.

Multi-link mechanism

- To efficiently utilize all available spectrum resources, the Wi-Fi 7 standard defines a multi-link aggregation technology — MLO. This technology enables a STA to simultaneously establish links with multiple radios (2.4 GHz, 5 GHz, and 6 GHz) of an AP. Using MAC layer technology, these cross-band links are aggregated into a virtual link to enable parallel communication across multiple links.

Preamble puncturing

- Based on channel bonding technology, multiple adjacent channels can be merged into one for communication. If one of the subchannels is severely interfered with and cannot be used, its neighbors are also unavailable. This leads to a significant decrease in overall wireless bandwidth, degrading the throughput. Preamble puncturing technology allows for skipping heavily interfered subchannels by "puncturing" through them. This enables the utilization of adjacent clear subchannels, preventing the overall wireless bandwidth decrease and thereby improving wireless performance in the case of interference.

High-Speed Access

The AP supports 160 MHz channel width, which increases the number of available data subcarriers and expands transmission channels. In addition, the AP adopts 4096-QAM to achieve a rate of up to 0.69 Gbps on the 2.4 GHz band and 5.76 Gbps on the 5 GHz band, meaning up to 6.45 Gbps for the device.

Omnidirectional Antenna

The AP has built-in omnidirectional antennas and works simultaneously on the 2.4 GHz and 5 GHz frequency bands to provide coverage over an optimal experience radius of 160 meters.

High-Specification Protection

- The AP is designed with a metal shell and overall heat dissipation, allowing it to operate in an extended temperature range of –40°C to +70°C. It also features an IP68 waterproof and dustproof design, as well as 6 kA surge protection for Ethernet ports, meeting industrial-grade requirements.
- Cable connectors are secured using metal fasteners to ensure secure connections and stable device operations.

Wired and Wireless Security Guarantee

To ensure data security, this AP integrates wired and wireless security functions and provides comprehensive security protection.

Authentication and encryption for wireless access

- The AP supports WEP, WPA/WPA2-PSK, WPA3-SAE, WPA/WPA2-PPSK, and WPA/WPA2/WPA3-802.1X authentication/encryption modes to ensure the security of wireless networks. The authentication mechanism is used to authenticate user identities so that only authorized users can access network resources. The encryption mechanism is used to encrypt data transmitted over wireless links to ensure that data can only be received and parsed by authorized users.

Authentication and encryption for wired access

- The AP access control mechanism ensures that only authorized users can access the AP. Control and provisioning of wireless access point (CAPWAP) link protection and Datagram Transport Layer Security (DTLS) encryption provide security guarantee and improve data transmission security between the AP and wireless access controller (WAC).

Automatic Radio Calibration

Automatic radio calibration allows the AP to collect signal strength, channel, and other parameters of surrounding APs and generate an AP topology according to the collected data. Based on interference from surrounding environments and their loads, the AP automatically adjusts its transmit power and working channel to make the network operate at the optimal performance. In this way, network reliability and user experience are improved.

Cloud Management

The AP supports cloud-based management. It provides various authentication functions, such as PSK and Portal authentication, without the need of a WAC or an authentication server. This greatly simplifies networking and

reduces capital expenditure (CAPEX). In addition, the AP can use the Huawei SME Network cloud management platform to implement cloud-based network planning, deployment, inspection, and O&M.

Deployment and O&M Through HUAWEI eKit App

The HUAWEI eKit App supports Wi-Fi-based deployment and barcode scanning–based deployment. After the deployment is complete, you can perform more maintenance operations on the HUAWEI eKit App.

Wi-Fi-based deployment

- In quick deployment mode, you can connect your mobile phone to the management Wi-Fi network of an AP to deploy a network. This allows the device to automatically go online and be remotely managed on the app.

Barcode scanning–based deployment

- Another method is to use a mobile phone to scan the AP's serial number (SN) and synchronize the device information to HUAWEI eKit platform for device onboarding management.

Product Features

Fit AP Mode

Item	Description
WLAN features	Compliance with IEEE 802.11be and compatibility with IEEE 802.11a/b/g/n/ac/ax on both 2.4 GHz and 5 GHz frequency bands
	Maximum ratio combining (MRC)
	Space time block code (STBC)
	Cyclic delay diversity (CDD)/Cyclic shift diversity (CSD)
	Beamforming
	MU-MIMO
	Orthogonal frequency division multiple access (OFDMA)
	Compliance with 4096-QAM and compatibility with 1024-QAM/256-QAM/64-QAM/16-QAM/8-QAM/QPSK/BPSK
	Low-density parity-check (LDPC)
	Frame aggregation, including aggregate MAC protocol data unit (A-MPDU) (Tx/Rx) and aggregate MAC service data unit (A-MSDU) (Tx/Rx)
	802.11 dynamic frequency selection (DFS)
	Short guard interval (GI) in 20 MHz, 40 MHz, 80 MHz, and 160 MHz modes
	Wi-Fi Multimedia (WMM) for priority-based data processing and forwarding
	WLAN channel management and channel rate adjustment
	Automatic channel scanning and interference avoidance
	📖 NOTE For details about WLAN channel management, see the *Country Codes and Channels Compliance*.
	Service set identifier (SSID) hiding configuration for each AP, supporting Chinese SSIDs
	Signal sustain technology (SST)
	Unscheduled automatic power save delivery (U-APSD)
	CAPWAP
	Automatic AP onboarding
	Extended service set (ESS)

Item	Description
	Multi-user call admission control (CAC)
	Advanced cellular coexistence (ACC), minimizing the impact of interference from cellular networks
	802.11k and 802.11v smart roaming
	802.11r fast roaming (≤ 50 ms)
Network features	Compliance with IEEE 802.3ab
	Auto-negotiation of the rate and duplex mode, and automatic switchover between the Media Dependent Interface (MDI) and Media Dependent Interface Crossover (MDI-X)
	Compatibility with IEEE 802.1Q
	SSID-based VLAN assignment
	VLAN trunk on uplink Ethernet ports
	Management channel of the AP's uplink port in tagged or untagged mode
	DHCP client, obtaining IP addresses through DHCP
	Tunnel data forwarding and direct data forwarding
	Mesh backhaul
	IPv6
	STA isolation in the same VLAN
	IP access control list (ACL)
	Link layer discovery protocol (LLDP)
	Uninterrupted service forwarding upon CAPWAP tunnel disconnection
	Unified authentication on the WAC
QoS features	WMM parameter management for each radio
	Queue mapping and scheduling
	User-based bandwidth limiting
	Adaptive bandwidth management (automatic bandwidth adjustment based on the user quantity and radio environment) for user experience improvement
	Airtime scheduling
Security features	Open system authentication
	WEP authentication and encryption using a 64-bit, 128-bit, 152-bit, or 192-bit encryption key
	WPA2-PSK authentication and encryption
	WPA2-802.1X authentication and encryption
	WPA3-SAE authentication and encryption
	WPA3-802.1X authentication and encryption
	WPA-WPA2/WPA2-WPA3 hybrid authentication
	WPA2-PPSK authentication and encryption
	802.1X authentication, MAC address authentication, Portal authentication, etc.
	DHCP snooping
	802.11w Protected Management Frames (PMF)
	DTLS encryption
	Dynamic ARP inspection (DAI)
	IP Source Guard (IPSG)
Maintenance	Unified AP management and maintenance on the WAC

Item	Description
features	Automatic AP onboarding, automatic configuration loading, and plug-and-play (PnP)
	Automatic batch upgrade
	Telnet and STelnet using SSHv2
	SFTP using SSHv2
	Real-time configuration monitoring and fast fault locating using the network management system (NMS)
	System status alarm

Cloud-Managed/FAT AP Mode

Item	Description
WLAN features	Compliance with IEEE 802.11be and compatibility with IEEE 802.11a/b/g/n/ac/ax on both 2.4 GHz and 5 GHz frequency bands
	MRC
	STBC
	CDD/CSD
	Beamforming
	MU-MIMO
	OFDMA
	Compliance with 4096-QAM and compatibility with 1024-QAM/256-QAM/64-QAM/16-QAM/8-QAM/QPSK/BPSK
	LDPC
	Frame aggregation, including A-MPDU (Tx/Rx) and A-MSDU (Tx/Rx)
	802.11 DFS
	Short GI in 20 MHz, 40 MHz, 80 MHz, and 160 MHz modes
	Priority mapping and scheduling in compliance with WMM
	WLAN channel management and channel rate adjustment
	📖 NOTE For details about WLAN channel management, see the *Country Codes and Channels Compliance*.
	Automatic channel scanning and interference avoidance
	SSID hiding configuration for each AP, supporting Chinese SSIDs
	U-APSD

Product Specifications

Item		Description
Technical specifications	Dimensions (H x W x D)	92 mm x 250 mm x 220 mm
	Weight	2.89 kg
	Port	1 x 2.5GE (RJ45), 100M/1000M/2500M auto-sensing 1 x 10GE optical (SFP+), GE/2.5GE/10GE auto-sensing 1 x USB port 1 x 48 V DC power port 📖 NOTE The 2.5GE electrical port supports PoE input.
	LED indicator	Indicates the power-on, startup, running, alarm, and fault states of the system.
Power specifications	Power input	• DC: 48 V ± 10%

Huawei eKitEngine AP772 Wireless Access Point Datasheet

| Item	Description
	• PoE power supply: in compliance with IEEE 802.3bt/at/af 📖 NOTE When working in 802.3af power supply mode, the AP is restricted in functions. For example, the USB port is unavailable. For details, see the Info-Finder.
Maximum power consumption	• 20.4 W (excluding USB) 📖 NOTE The actual maximum power consumption depends on local laws and regulations.
Environmental specifications Operating temperature	−40°C to +70°C (If the altitude is in the range of 1800 m to 5000 m, the temperature decreases by 1°C every time the altitude increases by 300 m.) 📖 NOTE Some part of the AP shell may have a higher temperature than the upper limit of the operating temperature range. In this case, the AP's performance will not be affected as long as the shell temperature complies with the safety standards.
Storage temperature	−40°C to +85°C
Operating humidity	0% to 100% (non-condensing)
IP rating	IP68
Altitude	−60 m to +5000 m
Atmospheric pressure	53 kPa to 106 kPa
Radio specifications Antenna type	Built-in omnidirectional antennas
Antenna gain	2.4 GHz: 5 dBi 5 GHz: 5 dBi 📖 NOTE 1. The preceding gains are the peak gains of a single antenna. 2. When all 2.4 GHz or 5 GHz antennas are combined, the equivalent antenna gain is 3 dBi for 2.4 GHz radios or 3 dBi for 5 GHz radios.
Maximum quantity of SSIDs on each radio	10
Maximum number of access STAs	1024 📖 NOTE The actual number of users varies according to the environment.
Maximum transmit power	2.4 GHz : 28 dBm (combined power) 5 GHz: 30 dBm (combined power) 📖 NOTE The actual transmit power varies according to local laws and regulations.
Power adjustment increment	1 dBm
