## OVERVIEW

The CS692 HDMI USB KVM Switch links two HDMI-enabled PCs or devices to a single USB keyboard, USB mouse, and HDMI display console. The CS692 Switch takes a giant step forward from prior cable KVM models in the Petite series, by offering full HDMI functionality, USB 2.0 peripheral sharing (via a USB hub attached to the USB mouse port), and a firmware upgrade function that allows you to keep up with latest available versions.

Another new feature of the CS692 is the implementation of a remote port selector. This means that you can now control port switching from the desktop while the switch itself can be placed in a convenient, out-of-the-way, location. Also, in addition to new hotkeys, the CS692 offers the latest mouse port-switching function – simply double-click on the scroll wheel of a USB mouse to change ports.

Furthermore, the CS692 features ATEN's patented Video DynaSync technology, which eliminates boot-up display problems and optimizes resolution when switching between ports.

Finally, the CS692's new Power on detection feature means that if one of the computers is powered off, switch will automatically switch to the other powered-on computer.

Featuring an unbeatable combination of HDMI functionality, USB 2.0 peripheral sharing convenience, gaming keyboard support, and enhanced user-friendly operations, the CS692 allows users to keep up with the latest innovations in desktop multimedia applications.
