

Our network security solutions won't cost you the earth!

Struggling to ensure the best return on investment?

The need to control network access and provide a secure infrastructure is greater than ever. Modern enterprise has seen a phenomenal increase in the convergence of network functionality with voice, video and data, all leading to a greater risk of attack from exposure.

Allied Telesis products support Network Access Control by enforcing user access based network policy rules. Certification with Microsoft, Symantec and other vendors ensures that an Allied Telesis NAC solution is the best solution for policy enforcement and network switching.

Additional security features including Access Control Lists (ACL's), ICSA certified Stateful Firewall, SSH Management and extensive VPN support mean Allied Telesis can meet all your network security requirements.
