

## **RAPIER 'i' SERIES**

# WAN Capable Layer 3 Fast Ethernet Switches

### Rapier 16fi

16 port 100FX (SC or MT-RJ) Fast Ethernet Layer 3 switch with 2 expansion bays and WAN access bay

### Rapier 24i

24 port 10/100TX Fast Ethernet Layer 3 switch with 2 expansion bays and WAN access bay

### Rapier 48i

48 port 10/100TX Fast Ethernet Layer 3 switch with 2 expansion bays

### **Performance**

Allied Telesyn's Rapier 'i' series of 10/100Mbps Layer 3 switches deliver an unprecedented level of integration, feature richness and switching performance at affordable prices. With wirespeed Layer 2 switching and wirespeed Layer 3 IP routing on all ports, these switches are designed for high-performance desktop connectivity, workgroup and server farm aggregation or backbone applications. In addition to the impressive switching performance, the Rapier 'i' series brings a large set of optional high-level Layer 3 and security features for more advanced networking applications.

### **Progressive Features**

All Allied Telesyn's Layer 3 switches come with the feature rich operating system AlliedWare, which includes Layer 3 IP Static Routing, RIP, RIPv2, VRRP and OSPFv2 routing protocols. For advanced networking applications Allied Telesyn offers the Rapier 'i' series with three optional feature licenses: Full Layer 3 upgrade, Advanced Layer 3 upgrade, and Security upgrade. The Full Layer 3 upgrade enables a set of additional routing protocols such as IPX, AppleTalk, DVMRP, VRRP, PIM-DM/SM and RSVP. The Advanced Layer 3 upgrade provides a set of the specialized protocols consisting of IPv6, BGP4, and Load Balancer. The Security upgrade offers an ICSAcertified Stateful Inspection Firewall as well as both SMTP and HTTP application gateways.

### **WAN Support - Rapier Switch/Router**

The Rapier 16fi and 24i models support an optional Network Services Module (NSM) with a variety of Port Interface Cards (PICs) to provide Wide Area Network connectivity for EI, TI, PRI ISDN, BRI ISDN, Asynchronous and Synchronous communications, Frame Relay and X.25. The AlliedWare operating system provides Layer 3 IP static routing, RIP, RIPv2, VRRP and OSPFv2 routing protocols, while optional specialized protocols are also available such as BGP4, IPX, RSVP, Appletalk, and the multicast routing protocols of DVMRP and PIM-DM/SM. These routing features give the Rapier 16fi and 24i the ability to not only act as a managed Layer 3 switch, but also as a fully specified router with four WAN interfaces.

### **Switching Features**

The Rapier 'i' series of switches are some of the most powerful switches on the market. All Rapier 'i' Layer 3 switches include a suite of advanced switching features such as IEEE 802. I Q VLAN Tagging, IGMPv2, 802. I p Traffic Prioritization of packets at Layer 3 and Layer 4, and broadcast and multicast traffic control. The Quality of Service (QoS) features offered by the Rapier 'i' series are particularly useful for multitenant unit, multi business unit, Telco, or Network Service Provider applications.

### **Return on Investment**

Today's economy demands that network investments provide a Return On Investment sooner rather than later. Cost effectiveness is achieved three ways. First, Rapier 'i' is the first Layer 3 switch with an integrated WAN router. Networks using a Layer 3 switch that does not support WAN routing need to incorporate additional router equipment at extra expense. Second, Rapier 'i' has three optional feature licences so you only pay for the specialized features you need. Third, the Rapier 'i' series of switches offer the greatest variety of uplinks at the lowest cost.

### **Key Features**

- Wirespeed Layer 2 Layer 7 filtering
- · Wirespeed Layer 3 IP routing
- Wirespeed Layer 2 switching
- Non-blocking at full line rate for all packet sizes (Rapier 16fi & Rapier 24i)
- Port trunking with link aggregation
- Stacking with open standards based interfaces
- Stateful Inspection Firewall
- BGP4 option
- IPv6 option
- OSI option
- · Load Balancer option
- Support up to 255 VLANs
- Private VLANs
- Bandwidth limiting
- · Broadcast and multicast traffic control
- IPsec
- L2TP
- IP RIP vI and v2
- OSPF v2
- VRRP
- TACACS+
- 802.1x
- SNMPv3
- · Redundant power supply option
- 2 expansion bays
- Lifetime warranty

Choose from 100FX, copper Gigabit, or fiber Gigabit modules. Alternatively, choose unpopulated GBIC module and populate it with one of five GBIC types from Allied Telesyn.

The Rapier 'i' series offers an unmatched combination both switching and routing capabilities coupled with a flexible set of specialized features and uplink options.

#### **Fabulous Fiber**

With 16 fiber 100FX ports the Rapier 16fi is uniquely suited to demanding environments where not only the full feature richness and switching performance of the Rapier 'i' switch is needed, but also where cable security and electro-magnetic immunity (EMI) are considerations. As well as performing under these demanding environments the 16fi offers the flexibility to provide access to the end station or to perform as an aggregation device. Due to the exceptional cable length afforded by 16fi's 100FX ports, networks that require an aggregation switch that provides routing between distant sites of up to 2000 meters can be comfortably met.

#### **IPv6 - The Future**

Don't be shut out of the next generation of the Internet Protocol, IPv6. The Rapier series enables networks to take advantage of IPv6's important benefits:

- Addresses are 16Bytes long in contrast to IPv4's 4Byte addresses.
- Globally unique addresses with more levels of addressing hierarchy, to reduce the size of routing tables.
- Auto-configuration of addresses by hosts.
- Improved scalability of multicast routing, by adding a 'scope' field to multicast addresses.
- A new type of address, the 'anycast address,' which is used to send a packet to any one of a group of devices.

### **Bandwidth Limiting**

All Rapier 'i' series switches come with asymmetric bidirectional bandwidth limiting, per port or per QoS traffic class, at no additional cost. With bandwidth limiting, Network Service Providers can define throughput levels for each customer and sell their various service levels at tiered prices. These features are ideal to manage different applications like VoIP, Web browsing, Video and email to manage fee-based customers. The Rapier 'i' bandwidth limiting feature provides the smallest granulation available in Layer 3 products. Service Providers can define ingress limits down to 64Kbps segments and egress limits down to IMbps segments. The segment definitions can be

asymmetric and each port can be set to different values. An additional benefit is that loop back ports are not required.

### **Stacking**

Stacking provides Web and CLI based management of up to 9 switches with the same effort as for one switch. The Allied Telesyn solution uses open standards interfaces as stacking links so that many switches can be stacked across different sites, which is not possible using the proprietary stacking cable solutions. Also the use of open standards interfaces avoids the use of expensive specialized hardware with limited topologies.

### **Redundant Power Supply**

AC models of Rapier 'i' series switches have a Redundant Power Supply (RPS) connector on their rear panel, and use the AT-RPS8000 (redundant power supply). The AT-RPS8000 is a chassis that holds up to four removable AT-PWR8000 RPS units. To provide backup power to Rapier 'i' series switches, each switch must be connected to an AT-PWR8000 power unit, and the power unit must be installed in an AT-RPS8000 chassis.

### **About Allied Telesyn**

Allied Telesyn International is a member of the Allied Telesis Group (ATI), which, founded in 1987, now has offices around the globe, over 2,800 employees and over \$500M of worldwide annual revenue. The attributes which have led ATI to achieve its leading position in the enterprise, operator and connectivity business segments can be summarised by four key elements: its business focus on networking technology for professional markets, where ATI has proved to be the only company capable of providing a total end-to-end solution at a high price/performance ratio; the ability to handle every aspect of its own products from design to marketing; the development of components and solutions which accommodate flexible. efficient and reliable network construction; and support from sound warranty terms and quality services. Allied Telesyn connects the IP world efficiently thanks to affordable and highly reliable network solutions. For more information see: www.alliedtelesyn.com

### **Service and Support**

Allied Telesyn provides value-added support services for its customers under its Net.Cover<sup>SM</sup> programs. For more information on Net.Cover<sup>SM</sup> support programs available in your area, contact your Allied Telesyn sales representative or visit our website: www.alliedtelesyn.com

#### **Performance**

Rapier 16fi: 9.6Gbps switching fabric, 5.4Mpps forwarding rate
Rapier 24i: 9.6Gbps switching fabric, 6.6Mpps forwarding rate
Rapier 48i: 9.6 × 2 = 19.2Gbps switching fabric, 10.1Mpps forwarding rate
